ClassicLEDs

Making the Past Brighter

ClassicLEDs LLC announces the latest in their new Camaro LED systems. This Camaro LED design fills the entire lens, ***to include the center***, with 208 5mm Super Bright red LEDs *Per Side*. Each board is placed within it's own housing, replacing the OEM housing. This direct replacement makes a very easy installation. While retaining the original appearance, this offers the choice of sequential or non sequential operation, with or without white reverse lights. No major modifications required.

This LED system operates as a direct replacement for the OEM bulb. Running lights are dim, brake and turn signal is bright.

Additionally, our new sequential control unit contains a button to stop the sequence mode. With a simple push of the button, the sequence mode will be pause allowing the turn signal to operate as a non sequential system. Press the button again, and, like magic, the sequence mode is activated....

Non Sequential	\$295.95	With or without Rev
Sequential	\$305.95	With or without Rev

All **ClassicLEDs** products come with a limited lifetime warranty.

All **ClassicLEDs** products are manufactured in Oregon.
